

Terry is a fauna ecologist working as a self-employed environmental consultant and, until COVID, as an international wildlife guide. Despite an interest in natural history since childhood, Terry did not work in the field until his mid-thirties, whilst undertaking a degree in environmental science at Griffith University. Before that he used various occupations to finance trips in pursuit of fauna in Australia and beyond. Once formally qualified, Terry worked for the Fauna Assessment Unit for the Environmental Protection Agency, conducting fauna surveys in the Brigalow Belt, and the Rainforest Cooperative Research Centre, as well as a number of bodies such as the Centre for Riverine Landscapes and then various consultancy companies.

He has conducted fauna surveys in all of Queensland's bioregions as well as in the Northern Territory, New South Wales, South Australia and Papua New Guinea. In particular, Terry has been involved in documenting the fauna of the Torres Strait and training Torres Strait Regional Authority rangers in field skills. He is an avid supplier of data to the Queensland WildNet (Wildlife Online) database and is a member of the Records Appraisal Committee of Birds Queensland. He has provided expert advice to a number of bodies such as the Squatter Pigeon Recovery Team and the Brigalow Belt Reptile Recovery Team.

Terry worked as a vertebrate ecologist for the 2nd year environmental science subject *Studies of an Asian Rainforest* (Griffith University) at Danum Valley Field Centre, Sabah, Malaysia and Batu Apoi Forest Reserve, Brunei Darussalam. He has also worked as a wildlife guide in Brazil, China, Japan and Sabah (Malaysian Borneo) and as a bird guide in Australia for international birders. He is the author of a number of book chapters and journal and magazine articles on subjects such as rainforest restoration, the distribution of mammals in the Torres Strait, rainforest reptiles, riparian fauna and the impact of occupational health and safety requirements on fauna surveys. Terry is a keen photographer and provides photos of wildlife to books and many scientific and conservation organisations and government departments.
